SECTION 1

Status at a glance & action items

Status labels used throughout: **Live** = on waradly-1.web.app now. **Planned** = agreed, not built yet.

Area	Status	Notes
Website, three dashboards, backend	Live	Buyer, supplier and admin flows end to end.
Landing page, logo, Watermelon-style design	Live	Deployed.
Verification & password emails to every inbox	Live	Sent by Firebase's own mailer; previously only reached the Resend account owner.
Branded HTML emails, clear form error messages	Live	Emails get a header and clickable button; forms say exactly what is wrong.
sitemap.xml & robots.txt	Live	Next: submit the sitemap in Google Search Console.
Backend on Node.js 22	Live	Deployed — safe from the 30 October 2026 shutdown of Node.js 20.
Supplier subscription (Paymob, EGP)	Planned	First offer free, then 500 EGP ($\approx$ \$9.80)/month or 4,800 EGP ($\approx$ \$94.12)/year.
Arabic version of the whole website	Planned	Language switch, right-to-left layout, Arabic font.

Emails land in spam until you have your own domain

Gmail disables links inside spam. Marking the email "Not spam" helps; the lasting fix is a custom domain verified in Resend (SPF/DKIM/DMARC records), so emails come from e.g. no-reply@waradly.com.

SECTION 2

Public website & accounts

Page	What it does
Landing page (/)	Hero with example RFQ card, trust points, how it works (4 steps), buyer and supplier sections, order-tracking timeline, call to action, footer. Log in / Sign up top right. Animated reveal on scroll; respects reduced-motion settings.
Register	Buyer or Supplier toggle (supplier pre-selected from "Join as a supplier"), email, username, phone, password, company legal name, country, region, and an 18+ business confirmation with terms acceptance.
Log in	Email + password. Locks the account for 15 minutes after repeated failed attempts. Suspended/banned users see the reason.
Verify email	Confirms the email from the link sent at sign-up. Required before logging in.
Forgot / reset password	Emails a reset link; new password must be 8+ characters with a letter and a number.
Supplier identity check	One-time identity verification for suppliers using device biometrics (WebAuthn) and a photo.
SEO	Search titles and descriptions, canonical URLs, link-preview tags, sitemap, robots.txt, Google Search Console ownership verified.

SECTION 3

Buyer dashboard

Page	What the buyer can do
Dashboard	Four live stats (open RFQs, total RFQs, active orders, completed orders) with counts animating in; recent RFQs table (title, category, quantity, status, deadline, created); recent orders; clear empty states; Create RFQ button.
My RFQs	List of all RFQs with category, status and date.
Create / edit RFQ	Title, category, quantity and unit, dimensions, material, technical specs, printing/customisation, delivery deadline and region, quality requirements, sample required, certifications, legal/compliance needs, attachments. Save as draft, then submit for review.
RFQ detail	Full request details and status; cancel the RFQ.
Compare offers	All offers side by side (supplier identity anonymised); accept the best one, which creates an order.
Orders	List of orders with status.
Order detail	Status, history, approve or reject a production sample, reorder the same item.
Order tracking	Step-by-step timeline of the order's progress.
Rate order	Rate the supplier after completion.
Profile	Username, avatar upload, company details.
Messages	Conversations about an RFQ or order, through the platform only.

SECTION 4

Supplier dashboard

Page	What the supplier can do
Available RFQs	Published RFQs matching their approved categories: title, category, buyer region, offer deadline, status.
RFQ detail	Full request details and attachments.
Submit / edit offer	Unit price, minimum order quantity (MOQ), production lead time, delivery time, shipping notes, sample availability and terms, payment terms, technical and quality notes, line items, attachments (certificates, photos). Edit until the deadline; offers after it are refused.
My Offers	All offers with status; withdraw an offer.
Orders	Won orders with status.
Order detail	Production actions: start production, submit a sample for buyer review, mark production completed.
Performance	Anonymised supplier ID, completed orders, average rating.
Verification	Upload identity/company verification documents and see verification status.
Capabilities	Apply for product categories; admin approves which RFQs they can receive.
Profile	Username, avatar, company details.
Subscription	Planned — after the first free offer, a Subscribe button: 500 EGP/month (≈ \$9.80) or 4,800 EGP/year (≈ \$94.12, 20% off). Paid online via Paymob (cards and mobile wallets). One-time payment per period, no automatic renewal.

SECTION 5

Admin dashboard

Page	What the Waradly team can do
Dashboard	Pending supplier approvals, RFQs awaiting review, flagged messages, open disputes, orders grouped by status.
RFQ Review	Approve or reject submitted RFQs with a reason.
RFQ Distribution	Choose which eligible suppliers receive a published RFQ; internal notes.
Offers	View all offers; flag suspicious ones.
Orders & order detail	Confirm payment, move the order through every status (production, hub, QC, transit, delivered), internal notes.
Supplier Verification	Review submitted documents (original files) and approve or reject suppliers.
Categories	Create, edit, activate or deactivate product categories.
Users & user detail	Search users; suspend, ban or reactivate accounts.
Message Flags	Review messages flagged for contact details; resolve flags.
Disputes	Resolve disputes: reopen production or cancel the order.
Audit Log	Searchable record of every important action and who did it.
Profile	Username and avatar.

SECTION 6

Shared features & mobile app

Across the whole website

- Waradly logo and gold-leaf favicon on every page; navy and gold brand; self-hosted Outfit font.
- Watermelon UI–style design: hairline card shadows, tactile buttons, glass pills, smooth motion.
- Responsive on desktop, tablet and phone; the sidebar becomes a slide-out menu on phones.
- Clear error messages from the server shown on every form.
- In-app notifications for key events; email notifications.
- Arabic version with a language switch and right-to-left layout — **Planned**.

Mobile app (Flutter)

Area	Screens
Accounts	Log in, Register (with the 18+ business confirmation), Profile.
Buyer	Dashboard, RFQ list, Create RFQ, RFQ detail, Compare offers, Orders, Order detail.
Supplier	RFQ feed, RFQ detail, Submit offer, My offers, Orders, Order detail.

SECTION 7

Backend — what the server does

Module	Responsibilities
Auth	Register, login with lockout, refresh/logout, email verification, password reset, WebAuthn identity check.
Users & organizations	Profiles, avatars, company details, role-based access (buyer / supplier / admin), suspension.
Categories & suppliers	Category management, supplier capability applications, verification documents, performance record.
RFQs	State machine (draft → submitted → review → published → receiving offers → awarded/closed), eligibility matching, distribution, deadlines.
Offers	Submit, edit, withdraw, flag; atomic acceptance so only one offer can win.
Orders	Full lifecycle with evidence uploads, samples, disputes, ratings, reorder.
Messaging	Conversations with automatic contact-detail detection and admin flag review.
Files	Access-checked storage, watermarking of shared documents, expiring signed links.
Identity protection	Anonymised IDs and per-viewer masking so buyers and suppliers never see each other's identity.
Notifications & email	In-app notifications; email via Firebase (auth) and Resend (others) with branded HTML.
Admin & audit	Dashboard counts, queues, moderation, full audit log of actions.
Subscriptions	Planned — Paymob checkout, signed payment callback, first-offer-free enforcement.

SECTION 8

Tools used & needed

Tool	Used for	Status	Cost
Firebase Hosting	Serves the website, free SSL	Used	\$0 inside free limits; extra use billed per month (9.2)
Cloud Functions (Node.js 22, Express)	Backend API	Used	\$0 inside free limits; extra use billed per month (9.2)
Cloud Firestore	Database	Used	\$0 inside free limits; extra use billed per month (9.2)
Firebase Authentication	Accounts, verification & reset emails	Used	\$0 up to 50,000 active users per month
Cloud Storage for Firebase	Files and attachments	Used	\$0 inside free limits; extra use billed per month (9.2)
Resend	Transactional email	Used	\$0 up to 3,000 emails per month; Pro \$20 per month
Google Search Console	Appear on Google	Used	\$0 — always free
sitemap.xml & robots.txt	Tell Google which pages to index	Used	\$0 — never charged
Flutter	Mobile app	Used	\$0 — always free
Git & GitHub Desktop	Version control	Used	\$0 — always free
VS Code + Claude Code	Development	Used	Your existing subscriptions
Custom domain	Brand URL, trusted email	Needed	~\$10–\$20 per year (est.)
Paymob merchant account	Subscription payments in EGP	Needed	2.75% + 3 EGP (≈ \$0.06) per payment; no monthly fee
Arabic web font	Arabic version	Needed	\$0 — free open-source font
Apple Developer / Google Play	Publish the mobile app	Optional	\$99 per year / \$25 one time
Lawyer	Terms, Privacy, Anti-Circumvention pages	Needed	Varies

SECTION 9

Pricing in USD

Every cost below says **how much** and **how often** you pay it. Prices are in US dollars as published by each provider; items charged in Egyptian pounds also show their USD value at **1 USD ≈ 51 EGP** (late July 2026 rate — check the current rate).

Expected cost at launch

\$0 – \$5 per month for Firebase and email, plus **about \$10 – \$20 per year** for a domain. Everything else is free until usage grows.

9.1 Summary — what you pay and how often

What	Price	How often	When you start paying
Firebase (website, backend, database, files, login)	\$0 inside free limits, then pay per extra use (see 9.2)	Per month — extra usage is added up and charged once a month	Only if usage goes above the free limits
Resend (emails)	\$0 on Free plan; \$20 or \$35 on Pro	Per month	Only above 3,000 emails a month or 100 a day
Custom domain (e.g. waradly.com)	~\$10 – \$20 (estimate)	Per year	When you buy it
Paymob (supplier payments)	2.75% + 3 EGP (≈ \$0.06)	Per successful payment — no monthly fee	Only when a supplier actually pays
Google Search Console, sitemap, SSL certificate	\$0	Never — always free	—
Apple Developer Program	\$99	Per year	Only to publish the app on the App Store
Google Play developer account	\$25	One time	Only to publish the app on Google Play
Legal pages (Terms, Privacy)	Varies (lawyer)	One time	Before real users sign up

9.2 Firebase — free limits and price for extra usage

Waradly must be on Firebase's **Blaze** (pay-as-you-go) plan because the backend needs Cloud Functions. Blaze still includes the free limits below. Some limits reset **every day**, others **every month**. Only usage above them is charged — added up over the month and billed **once a month** to your card, in USD.

Service	Free limit (and how often it resets)	Price for extra usage
Hosting — files stored	10 GB in total	\$0.026 per GB, per month
Hosting — data sent to visitors	360 MB per day (resets daily)	\$0.15 per GB
Functions — requests	2 million per month	\$0.40 per extra million requests
Functions — computing time	400,000 GB-seconds and 200,000 CPU-seconds per month	Google Cloud compute rates

Service	Free limit (and how often it resets)	Price for extra usage
Functions — data sent out	5 GB per month	\$0.12 per GB
Firestore — data stored	1 GiB in total	Google Cloud rate per GB, per month
Firestore — reads / writes / deletes	50,000 / 20,000 / 20,000 per day (resets daily)	A few cents per extra 100,000 operations
Storage — files stored	5 GB in total	\$0.026 per GB, per month
Storage — file downloads	1 GB per day (resets daily)	\$0.12 per GB
Authentication — users	50,000 active users per month	Google Cloud rates above that

9.3 Resend — email plans

Plan	Price	How often	Emails included
Free (current)	\$0	—	3,000 per month, maximum 100 per day
Pro	\$20	Per month	50,000 per month, no daily limit
Pro	\$35	Per month	100,000 per month, no daily limit

Verification and password-reset emails are sent by Firebase for free and do not count toward Resend.

9.4 XML sitemap & robots.txt

Item	Price	How often	Details
Creating the files	\$0	Done once	Already done — sitemap lists the 3 public pages; robots.txt keeps private areas out of Google.
Hosting them	\$0	Never	443 + 193 bytes, inside the free 10 GB.
Google downloading them	\$0	Never	Even 100 downloads a day ≈ 64 KB/day, 0.02% of the free 360 MB/day.
Submitting to Search Console	\$0	Never	Search Console is free.
Paid sitemap generators	Not needed	—	Only useful for sites with hundreds of changing public pages.

9.5 Supplier subscription — income (planned)

Plan	Supplier pays	How often	Paymob fee	Waradly keeps
Monthly	500 EGP (≈ \$9.80)	Every month	16.75 EGP (≈ \$0.33)	483.25 EGP (≈ \$9.48)
Annual (20% off)	4,800 EGP (≈ \$94.12)	Once a year	135 EGP (≈ \$2.65)	4,665 EGP (≈ \$91.47)

No automatic renewal: suppliers pay again when their month or year ends. The annual plan equals 400 EGP a month instead of 500. Paymob card rate shown; wallet rates may differ.

9.6 Estimated total cost per month

Stage	Rough usage	Estimated total per month
Launch / testing	Tens of companies, a few hundred RFQs	\$0 – \$5 per month
Early growth	Hundreds of companies, thousands of emails	\$5 – \$40 per month
Scaling	Thousands of companies	Grows with usage — watch the billing console

Plus the domain (~\$10 – \$20 per year). Estimates, not quotes — set a budget alert in Google Cloud Console → Billing → Budgets & alerts. Five monthly supplier subscriptions (≈ \$47 kept per month) would cover the top of the early-growth estimate.

Launch checklist

Task	When
☐ Submit sitemap.xml and request indexing in Search Console	Now
☐ Set the Auth email action URL to /verify-email and sender name to Waradly (Firebase console)	Now
☐ Confirm Blaze plan and set a budget alert	Now
☐ Buy a domain, connect it in Firebase Hosting, verify it in Resend	Before launch
☐ Open a Paymob merchant account (for the subscription)	Before subscriptions
☐ Publish Terms, Privacy and Anti-Circumvention pages	Before launch
☐ Create the first admin account and activate a product category	Before launch
☐ Add the scheduled job that marks past-deadline RFQs as EXPIRED	Before launch
☐ Register a DMCA agent if operating in the US	If applicable
☐ Build the supplier subscription and the Arabic version	Next
