

Waradly — App Flow

How each type of user moves through Waradly, page by page, with the API call behind each step. Diagrams use Mermaid (they render on GitHub and in VS Code's Markdown preview with a Mermaid extension).

Page paths are under `public-web/`. With `cleanUrls`, `/buyer/rfqs.html` is served as `/buyer/rfqs`.

1. The whole journey at a glance

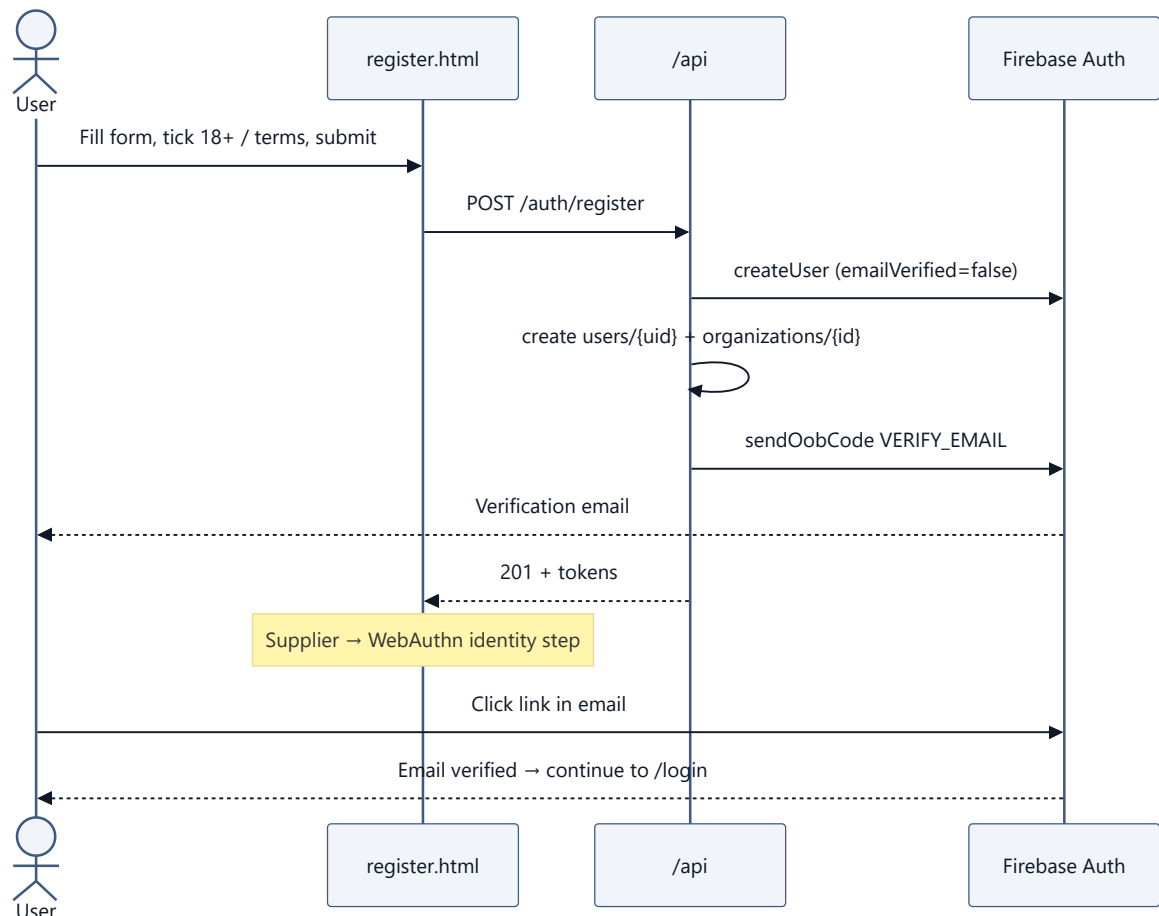

2. Public site and accounts

2.1 Landing page (/)

- Header: logo, section links, **Log in** and **Sign up** (top right).
- "Post your first RFQ" → `/register` . "Join as a supplier" → `/register?role=supplier` (Supplier pre-selected).

2.2 Registration and verification

- Validation errors are shown per field (e.g. "Password must be at least 8 characters.").
- Suppliers go through a one-time **identity verification** (device biometrics via WebAuthn + photo) right after registering.
- If the email link opens `/verify-email?oobCode=...`, the page calls `POST /auth/verify-email`. With `mode=resetPassword` it forwards to `/reset-password`.

2.3 Log in (/login)

1. `POST /auth/login` → tokens stored in the browser.
2. Redirect by role: buyer → `/buyer/dashboard`, supplier → `/supplier/rfqs`, admin → `/admin/index`.
3. Blocked if: wrong password (after 5 failures → locked 15 minutes), email not verified, or account suspended/banned (modal shows the reason).
4. If the user is already signed in, visiting `/login` sends them straight to their dashboard.

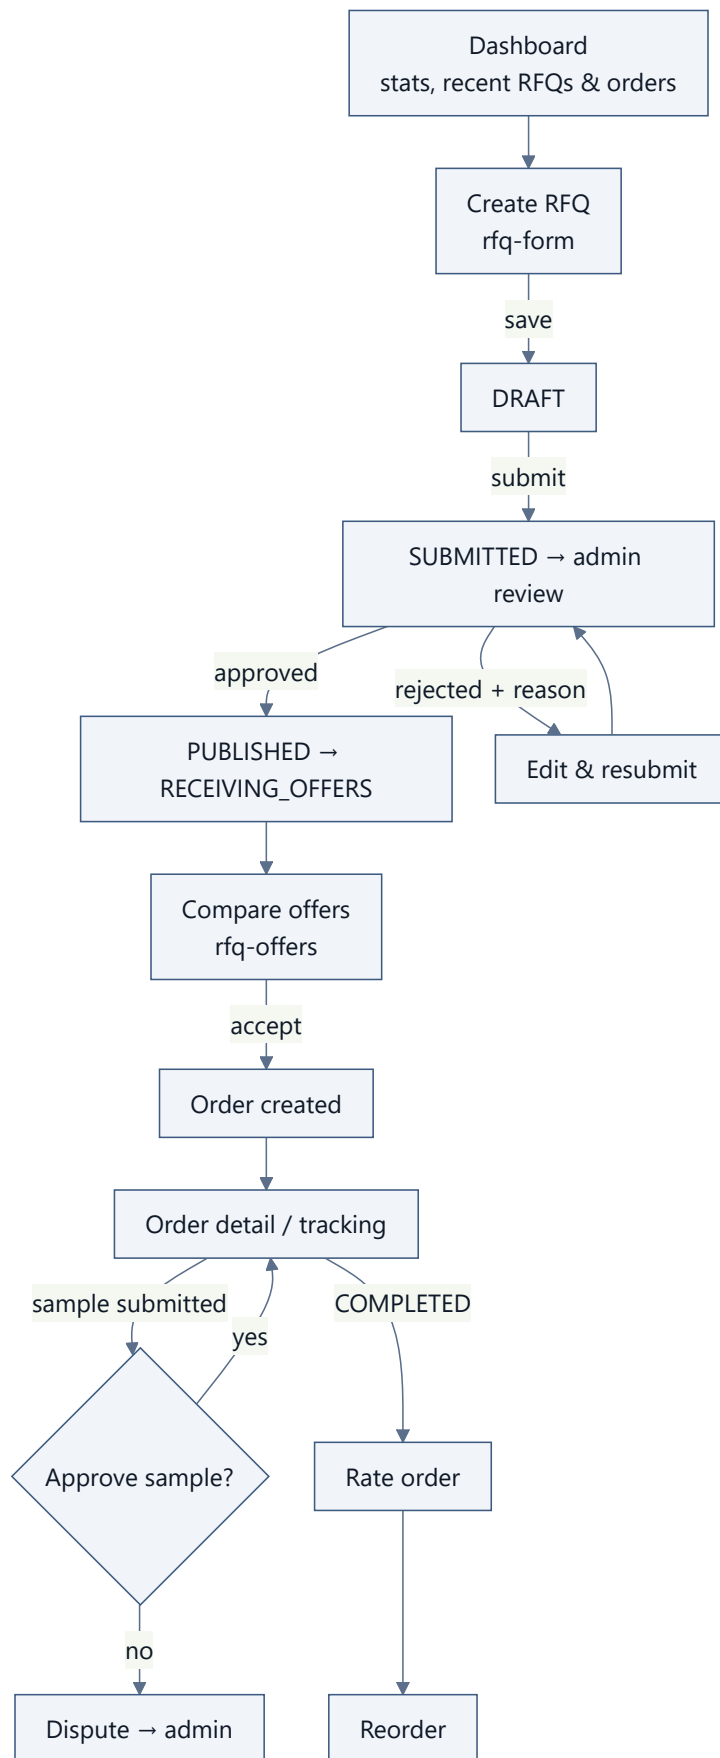

2.4 Forgot / reset password

`/forgot-password` → `POST /auth/password-reset-request` (always answers "sent", so emails can't be probed)
→ email link → `/reset-password?token=...` → `POST /auth/password-reset` → all sessions revoked → log in again.

2.5 Every protected page

1. `requireRole(...)` calls `GET /users/me`. No session → `/login`. Wrong role → that role's dashboard.
2. `mountShell()` draws the sidebar (desktop) or slide-out menu (phone).
3. A `401` on any call tries one token refresh, then signs out to `/login`.

3. Buyer flow

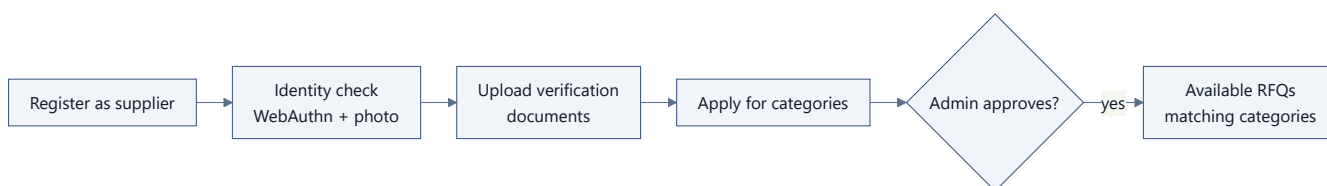

Step	Page	API
See overview	buyer/dashboard	GET /rfqs , GET /orders
Create / edit RFQ	buyer/rfq-form	POST /rfqs , PATCH /rfqs/:id , POST /files
Submit for review	buyer/rfq-form	PATCH /rfqs/:id/submit
List RFQs	buyer/rfqs	GET /rfqs
RFQ detail / cancel	buyer/rfq-detail	GET /rfqs/:id , PATCH /rfqs/:id/cancel
Compare & accept offers	buyer/rfq-offers	GET /rfqs/:id/offers , PATCH /offers/:id/accept
Orders	buyer/orders , buyer/order-detail , buyer/order-tracking	GET /orders , GET /orders/:id
Sample decision	buyer/order-detail	PATCH /orders/:id/samples/decision
Rate / reorder	buyer/order-rate , buyer/order-detail	POST /orders/:id/rate , POST /orders/:id/reorder
Profile	buyer/profile	GET/PATCH /users/me , POST /users/me/avatar , GET/PATCH /organizations/me

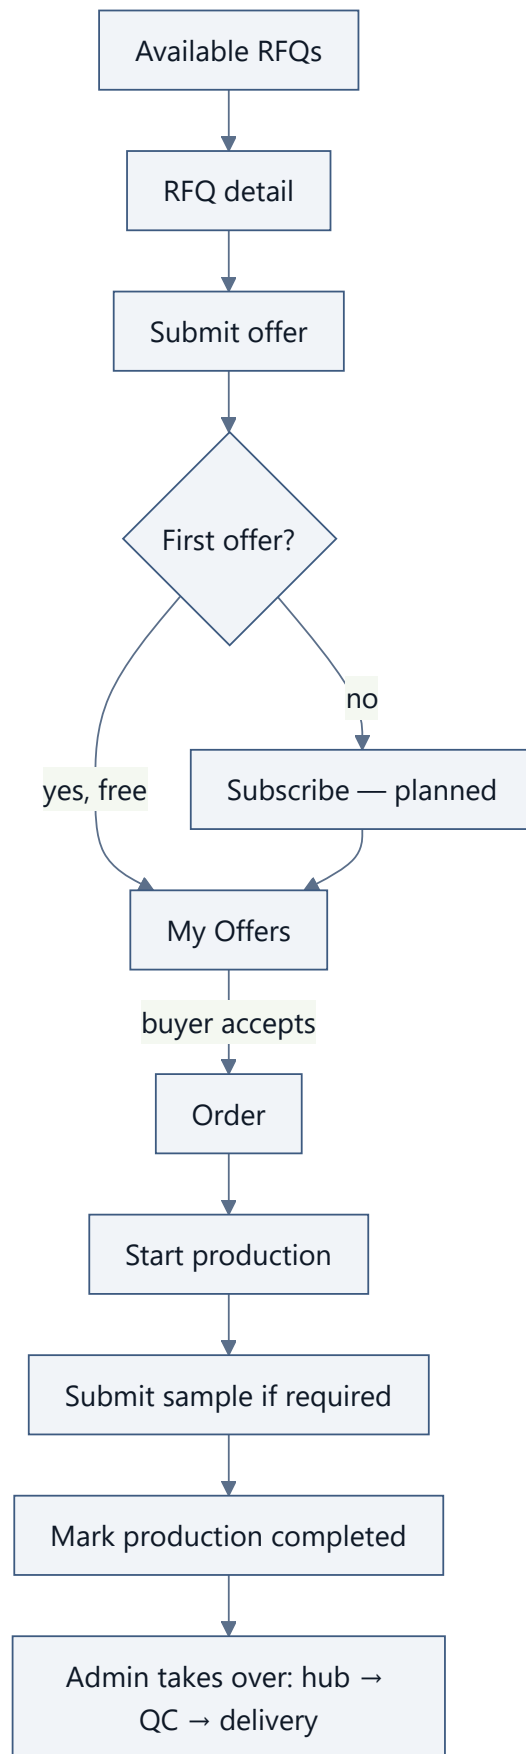

Rules the buyer meets: RFQs are editable only while `DRAFT` or `SUBMITTED` ; creating an RFQ requires a verified email; supplier identities are always anonymised ("Supplier #1").

4. Supplier flow

4.1 Onboarding

4.2 Offers and orders

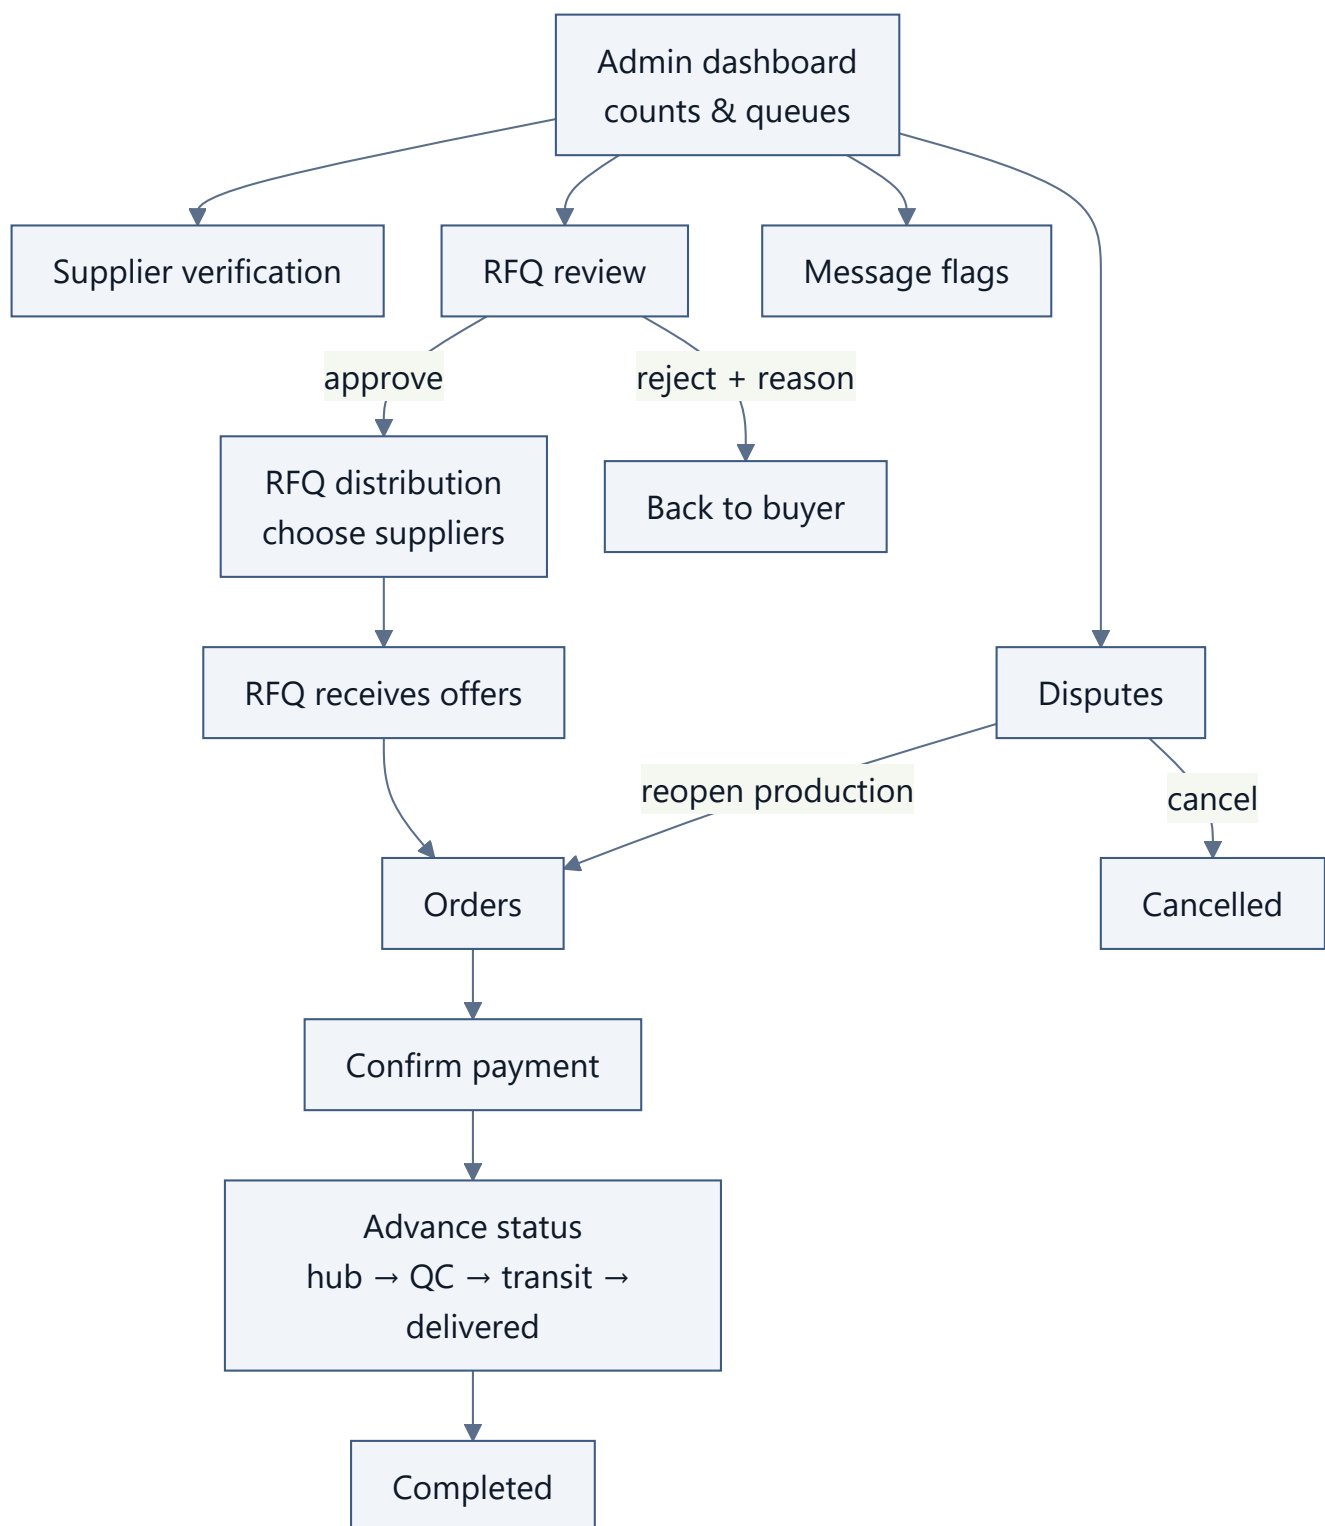

Step	Page	API
Verification	supplier/verification	POST /files , POST /suppliers/verification-documents , GET /suppliers/me
Categories	supplier/categories	GET /categories , GET/POST /suppliers/categories
RFQ feed	supplier/rfqs	GET /rfqs (eligible RFQs only)
RFQ detail	supplier/rfq-detail	GET /rfqs/:id
Submit / edit offer	supplier/offer-form	POST /rfqs/:id/offers , PATCH /offers/:id
My offers / withdraw	supplier/offers	GET /offers , PATCH /offers/:id/withdraw
Orders & production	supplier/orders , supplier/order-detail	GET /orders , PATCH /orders/:id/mark-production-started , POST /orders/:id/samples , PATCH /orders/:id/mark-production-completed
Performance	supplier/performance	GET /suppliers/me (anonymised ID, completed orders, average rating)

Rules the supplier meets: one active offer per RFQ; offers refused after the offer deadline; editable only while `SUBMITTED` or `UNDER_REVIEW` ; buyer identity always hidden (only display name and general region).

Planned — subscription: after the first free offer, submitting another requires an active subscription (500 EGP/month or 4,800 EGP/year via Paymob). Flow: `supplier/subscription` → choose plan → Paymob hosted checkout → Paymob calls the backend with a signed confirmation → subscription active → offers allowed again. See [IMPLEMENTATION_PLAN.md](#) Phase 3.

5. Admin flow

Task	Page	API
Overview	admin/index	GET /admin/dashboard
Approve suppliers	admin/suppliers-verification	GET /admin/suppliers/verification , PATCH /admin/suppliers/:id/verification , GET /files/:id/original

Task	Page	API
Review RFQs	admin/rfqs-review	GET /admin/rfqs/review , PATCH /admin/rfqs/:id/approve , PATCH /admin/rfqs/:id/reject
Distribute RFQ	admin/rfq-distribution	GET/PATCH /admin/rfqs/:id/distribution , PATCH /admin/rfqs/:id/notes
Offers	admin/offers	GET /admin/offers , PATCH /admin/offers/:id/flag
Orders	admin/orders , admin/order-detail	GET /admin/orders(/:id) , PATCH .../confirm-payment , PATCH .../status , PATCH .../notes
Categories	admin/categories	/admin/categories CRUD
Users	admin/users , admin/user-detail	GET /admin/users(/:id) , PATCH .../suspend , .../ban , .../reactivate
Message flags	admin/messages-flags	GET /admin/messages/flags , PATCH /admin/messages/flags/:c/:m/:f
Disputes	admin/disputes	GET /admin/disputes , PATCH /admin/disputes/:id/resolve
Audit log	admin/audit-logs	GET /admin/audit-logs

6. Order lifecycle (who moves each step)

From → To	Who	Evidence
— → OFFER_SELECTED	Buyer accepts offer	
→ PENDING_PAYMENT → PAYMENT_CONFIRMED	Admin	
→ PRODUCTION	Supplier (start production)	
PRODUCTION → SAMPLE_REVIEW	Supplier submits sample	Sample files
SAMPLE_REVIEW → PRODUCTION / DISPUTED	Buyer approves / rejects	
→ PRODUCTION_COMPLETED	Supplier	
→ RECEIVED_AT_HUB → QC_COMPLETED → READY_FOR_DELIVERY → IN_TRANSIT → DELIVERED	Admin	Required at hub, QC and delivery
→ COMPLETED	Admin / on completion	Buyer can then rate
DISPUTED → PRODUCTION / CANCELLED	Admin resolves	

7. Messaging

Opened from an RFQ or order page → `messages/conversation` . Messages go through `POST /conversations/:id/messages` . Emails, URLs and phone numbers are masked before storing and flagged; admins review flags in `admin/messages-flags` . Buyer and supplier see each other only by anonymised labels.

8. Notifications and emails

Event	In-app	Email
Account created	✓	Verification email (Firebase mailer)
Password reset requested	✓	Reset email (Firebase mailer)
New offer on buyer's RFQ	✓	
Other key events (RFQ decisions, order updates)	✓	Via Resend where configured

9. Error and edge paths

Situation	What the user sees
Invalid form input	Each failing field's message listed above the form
Session expired	One silent refresh, then redirect to <code>/login</code>
Wrong role for a page	Redirect to own dashboard
Suspended/banned at login	Modal with the reason
Supplier without supplier organization	"Your account isn't set up as a supplier organization" instead of an endless "Loading..."
Offer after deadline	"The offer deadline for this RFQ has passed."
Unknown URL	Served the landing page (Hosting catch-all rewrite)

10. Planned: Arabic

A language switch in the header/sidebar toggles the whole site between English and Arabic, flipping the layout right-to-left and using an Arabic font. The choice is remembered per browser. See [IMPLEMENTATION_PLAN.md](#) Phase 4.
